

Original WEINIG Table Lubricant Pumps

The manual table lubricant pump creates an oil film on the machine table. As a result the pieces of wood are more easily transported through the machine. Potentially emerging resin cannot build up on the machine table. Thus the table lubricant pump ensures automatic cleaning of the machine table.

High speed machines are primarily equipped with the automatic table lubricant pump. By means of a time relay installed in the switch cabinet, you will determine the intervals of the pump.

For the table lubricant pump we recommend our Original WEINIG Waxilit (see page 47).

Can be retrofitted on all machine types.

Original WEINIG Buffer Batteries

We recommend replacing the buffer battery every year in order to avoid a loss of data.

Prices and additional information upon request.
