

Maintaining quality for doors and panels specialist

Vinyl-wrapped doors and panels remain the core business of family-owned company, Janper Pty Ltd located in the outer Melbourne suburb of Bayswater. The company has over thirty years experience in the cabinet making industry and a hard-won reputation as a leading supplier to the trade of specialist, high quality coated doors and panels.

However, managing director, Paul Janssen says the company also designs and manufactures a range of other cabinetry for trade customer across Australia

Paul says innovation has been a critical aspect of Janper's business formula. "Over the years, we have spent millions of dollars investing in research and development and state-of-the-art manufacturing equipment."

"From automatic routing systems, to our high pressure vacuum press, this reflects our determination and commitment to keep abreast of Australian and international standards in quality."

With a workforce exceeding 30 Janper is a prominent member of Victoria's cabinetmaking industry. The company has an impressive line up of woodworking and other machinery that includes five flat panel nesting stations, a modern, sophisticated vacuum form press and edgebanders.

To support its quality manufacturing processes Janper has recently installed a German-manufactured Holzher Accura edgebander. These edgebanders are gaining a reputation as a leading, high performance brand in Australia. The new Accura edgebander will support the company's existing Holzher Arcus edgebander that is continuing to give accurate, reliable service.

Weinig general manager Neil Forbes says Holzher Accura edgebanders are renowned for setting the highest, professional standards for edgebanding and this is especially critical for Janper; a company that has built its reputation on high quality specialist products.

Paul says the company's Duraform® doors offer the highest calibre finish that has made Janper a leading manufacturer of vacuum formed doors in the industry.

Machine operator Phil Snowden with Paul Janssen ... innovation has been a critical and millions of dollars have been investing in research and development and state-of-the-art equipment.

"With over 50 different designs and ten edge treatments, architects and designers frequently specify Duraform® doors for their projects," he says.

In addition Janper edge doors and panels are available in a wide selection of colours and designs inspired by top European designers.

As indicated, Janper's manufacturing process aims to meet the most stringent requirements in terms of quality and flexibility, and in this regard Holzher Accura series edgebander is a critical part of the manufacturing production line.

Weinig's Victorian technical and sales representative Ian Staniforth says the Accura edgebander is ideally suited to the

sophisticated manufacturing processes employed at the Janper factory.

In developing the Accura edgebanders, the focal point has been 100 per cent repetition accuracy, fully automatic and flexible conversion and perfect appearance of components produced.

"Accura edgebanders redefine edgebanding and are designed for highest requirements in terms of quality and flexibility," he says.

Requiring only 6.5 metres of floor space, the automated Accura edgebander series offers professional complete processing with invisible joints with Glu Jet Thin Film technology; integrated multifunction cutting technology; a 100 per cent repetition accuracy, work piece thicknesses up to 60 mm, and edge thicknesses up to 20 mm.

Paul concludes that Janper has enjoyed a long-term, very good relationship with local Weinig technical service and sales staff. "We are very satisfied with our relationship – they are part of our business success – and we look forward to that continuing into the future."
